ANNUAL PRICE LIST NEWER GLADS

Spring 1940

EVERETT CLARK

Poquonock, (Windsor) Connecticut

FOREWORD

As this 1940 Annual Glad Price List goes to press it finds a year of successful glad growing nearing its end. Here in the fertile Connecticut valley, in the heart of the tobacco country. We have been more fortunate than most of the eastern lands. We have suffered no drouth. Hardly a week passed without rain. Consequently I can say, with confidence that my bulbs are among the nicest that can be purchased.

This is a most opportune time to thank my many confirmed glad enthusiasts for their repeated orders, and also to express my sincere appreciation to those who are novices in glad growing and to wish them every success.

Terms: Single bulbs or bulblets at the ten rate, but no single item for less than five cents. 25 bulbs or bulblets at the 100 rate; 250 at the 1,000 rate. Pints and half pints in generous measure at the quart rates. Prepaid spring delivery on all orders over \$2.00—except for F. O. B. prices.

Cash, please. With the following extras of your selection: On orders up to \$5.00 you may select 10% in extra bulbs; \$5.00 to \$10.00, 15% in extra bulbs; \$10.00 to \$20.00, 20% in extra bulbs. Over \$20.00, 30% in extras. If you purchase large bulbs only in lots of 25 or more and will call for them or pay express charges, you may take a cash discount of one-third instead of extra bulbs. The above extras and discounts do not apply to F. O. B. quotations. Gratis bulbs for the names of your glad-loving friends.

Stocks of bulbs for 1940 guarantee the same bright, clean, healthy stock as usual.

This year, I have a number of extra large jumbo bulbs. If you wish these bulbs, specify, and send your order in early. The bulbs I prefer to grow myself and will use in filling orders are plump, high crowned stock grown from bulblets or small planting stock. (L) large, (M) medium, and (S) small sizes are those common to the trade. Large bulbs can be depended upon for the finest spikes. Medium sized bulbs will prove very satisfactory. Small bulbs may do well. Varieties in the 40-25-15 range, such as Aflame, Aida, Yvonne, may also be purchased in standard sizes per 100 as follows: No. 2, \$2.40; No. 3, \$2.00; No. 4, \$1.50; No. 5, \$1.00; No. 6, 60c; prepaid delivery.

Gladioli are very easy to grow. Following are a few of the principal rules to follow:

Select a place in the open garden where other tall growing plants will not shade them. Glads like and need full sunshine. Mix with the soil, any good grade of commercial fertilizer or well rotted compost or manure. Select good healthy bulbs. Place them in a trench at least five inches deep and about three inches apart in a straight or staggered row. Cover at once. It is better to plant deeper than too shallow. One or two light applications of fertilizer during the growing season, before buds appear, will help insure good spikes. Watch for thrips. If present use any of the sprays suggested below. Tartar emetic was very satisfactory with me this last season used as suggested below.

Join the Connecticut Gladiolus Society if you live nearby. You will be warmly welcomed by its members. Send the dues of \$2.00 to me and I will be glad to forward them to the Secretary.

SATISFACTION GUARANTEED

Successful control measures include the following:

(1) Treat the bulbs with Cyanogas-G or other fumigant upon cleaning the bulbs in the fall. Small quantities of bulbs may be put in paper bags or shoe boxes and sprinkled with Napthalene flakes—1 ounce per 100 lbs. Let the flakes evaporate. (2) Store in a cool, dry place and keep at a temperature of 40 degrees. Do not let the bulbs freeze. (3) Treat or soak in a solution of bichloride of mercury (corrosive sublimate) before planting. Husk the bulbs previously, if possible. Soak for two hours in a solution of 1.1000. one tablet to one pint of water. Use stone crocks, glass jars, or wooden tubs—not a metal container. Large numbers of bulbs may be tied in sacks and kneaded on the floor in lieu of husking. Thorough soaking will destroy all thrips and their eggs. (4) Spray every week or ten days after the plants are six inches high. Do not wait until the buds appear. It is too late then. Effective spraying will control those thrips that have survived or that may appear from nearby infestations. The cheapest and most effective spray now seems to be a combination of molasses or white sugar, and paris green or arsenate of lead—one pint of molasses to two tablespoons of paris green to three gallons of water. Keep the solution well stirred. An over dose of paris green will severely burn the foliage or even kill the plants. Arsenate of lead will not burn, sticks to foliage better, but shows up plainly on foliage. Black-leaf 40 may be added if desired. Apparently, thrips have a "sweet tooth" and thus get the poison. Other and more expensive materials are Cubor, Red Arrow, and Lethane. Cubor dust—1% Rotenone—proved very effective, when applied before the dew was off, and may supplant spraying.

Tartar Emetic, 4½ teaspoonsful; Sugar 2/3 cup to 3 gals. water.
